Bob, please see below for a discussion of available file material from TCEQ on the Schlumberger facility. Based on the discussion below, there isn't any mention of metals being a potential waste stream at that facility. The 104(e) may have to start with questions to determine if metals were a waste stream and how and where it would have been handled if present.

Subject: RE: WCR 112

Actually we looked through files a few months ago prior to the public meeting and determined from past correspondence dating back to the mid 80s and 90s that only solvents were mentioned. To refresh my memory I looked through the files again the other day.

Pretty good records were kept from the following:

- 1) a site inspection in 1991
- 2) Meeting memos (from mid 80s through the 90s) from our legal team, the Region, our enforcement staff, and Schlumberger's legal
- 3) TWC NORs from 1991 and 1992
- 4) Other miscellaneous letters from consultants and the TWC.

Everything I read mentioned VOCs not chrome. The NORs had only VOCs, acetone, and oily sludge from their truck washing activities as their waste stream. The units listed on the NORs were associated with VOCs and oily sludge.

If there is anything else please let me know.

Kirk

Hi Kirk,

Vince was inquiring if you had a chance to obtain any regulatory documents on Schlumberger's wastes? I CC Vince on this email so he could follow-up with you and Michael directly on obtaining the documents. Please let me know if I can be of any assistance.

Sincerely,
Dani
